PROJECT OBJECTIVES

TEAM ID : PNT2022TMID35187

Education preparation plays a vital role in a student's life. There are two main concerns that a student faces while applying for colleges. One of the concerns is getting admitted to their top colleges. It is seen that most students prefer colleges that are internationally known and among those, the United States of America is the first preference. The number of students who are applying for masters and higher education has been increasing in all countries.
India, in particular, has a huge number of students who are pursuing studies abroad. This is mostly because they find it difficult to get admission into the top colleges in India due to the intense competition and less availability of seats.
The second concern is money. Students who cannot afford to spend a lot of money and time into college counselors and college application forms have to pick a few of their dream colleges to apply to. But this doesn't guarantee that they will get admitted into one of those colleges. This is why University Admit Eligibility Predictor is an important project. The aim of the project is to reduce stress and make it a robust and smooth process for students to pursue their dreams.

This application will help aspirants see the probability of admit into their dream university with the simple click of a button.
